

Test Plan

SauceDemo E-commerce Web Application (www.saucedemo.com)

Document Version:	1.0	Prepared By:	QA Tester
Date:	September 3, 2026	Project:	manual-testing-ecommerce
Application Under Test:	Swag Labs / SauceDemo	Test Type:	Manual Functional & UI Testing

1. Introduction & Objectives

This document defines the scope, approach, resources, and schedule for manual testing of SauceDemo (saucedemo.com), a purpose-built e-commerce demo application used to practice QA fundamentals. The objective is to verify that core shopping flows — login, product browsing, cart management, and checkout — function correctly, and to identify, document, and report defects following professional QA practices (test case design, execution, and bug reporting).

2. Scope

2.1 In Scope

- Login / authentication, including all 6 documented test accounts (standard_user, locked_out_user, problem_user, performance_glitch_user, error_user, visual_user)
- Product listing (inventory) page, including product data display and sorting (Name A-Z/Z-A, Price low-high/high-low)
- Product detail page navigation
- Shopping cart: add item, remove item, cart persistence, cart badge accuracy
- Checkout flow: Step One (customer information & validation), Step Two (order overview & totals), Step Three (order confirmation)
- Side navigation menu (All Items, About, Logout, Reset App State)
- Basic UI/UX and accessibility spot-checks (image alt text, icon alignment, broken links)
- Session handling / access control on protected pages

2.2 Out of Scope

- Payment gateway / real financial transaction processing (SauceDemo does not integrate a live payment processor)
- Backend/API and database-level testing (no API is exposed for this application)
- Performance, load, and stress testing beyond a functional observation of performance_glitch_user
- Formal security penetration testing (only basic input-validation checks are included)
- Cross-browser and mobile-responsive testing (noted as a recommendation for a future test cycle)
- Automated test scripting

3. Test Environment

Item	Details
Application URL	https://www.saucedemo.com
Browser	Google Chrome (latest stable, v128+)
Operating System	Windows 11
Test Accounts	standard_user, locked_out_user, problem_user, performance_glitch_user, error_user, visual_user — all use password: secret_sauce
Test Data	Sample checkout data (name, postal code); no real personal or payment data used

4. Test Approach / Strategy

Testing will be performed manually using black-box functional and UI testing techniques. Test case design will apply **positive and negative scenario testing**, **boundary value analysis (BVA)** (e.g., empty cart quantity, empty required fields), and **equivalence partitioning (EP)** (e.g., valid vs. invalid credential classes, valid vs. invalid character types). Each of the six documented test personas will be exercised at least once, since SauceDemo intentionally maps each persona to a different class of defect. Results will be logged as Pass, Fail, or Blocked in the Test Cases register, and every failure will be filed as a bug report with reproduction steps.

5. Entry Criteria

- The application build (saucedemo.com) is deployed and publicly accessible
- Test Plan, Test Cases, and RTM have been drafted and reviewed
- Test accounts and test data are available and confirmed working

6. Exit Criteria

- 100% of planned test cases have been executed
- No open Critical or Blocker-severity defects remain undocumented
- Test summary report has been produced with pass/fail metrics and a release recommendation
- All identified defects are logged in the bug tracker with reproduction steps and severity/priority assigned

7. Roles & Responsibilities

Role	Responsibility	Owner
QA Tester	Test case design, execution, bug reporting	QA Tester
Test Lead / Reviewer	Test plan & RTM review, exit-criteria sign-off	QA Tester

8. Deliverables

- Test_Plan.pdf — this document
- Test_Cases.xlsx — 54 detailed test cases with execution results

- RTM.xlsx — Requirements Traceability Matrix mapping features to test cases
- Bug_Reports.xlsx and Bug_Reports/ — 11 logged defects, GitHub-Issue-ready
- Test_Summary_Report.pdf — final results, metrics, and release recommendation

9. Risks & Assumptions

Risk / Assumption	Impact	Mitigation
SauceDemo intentionally injects bugs for 4 of its 6 personas	Some 'failures' are expected behavior, not defects	Cross-check every failure against standard_user baseline before logging as a bug
No backend/API access is available	Cannot verify server-side data integrity	Limit scope to UI/functional black-box testing
Single browser/OS combination tested	Cross-browser issues may go undetected	Flagged as a follow-up recommendation

10. Schedule

Activity	Duration
Exploration of application	0.5 - 1 day
Test Plan & RTM authoring	0.5 day
Test case design (54 cases)	1 day
Test execution & bug logging	1 day
Test summary reporting	0.5 day
