

Test Summary Report

SauceDemo E-commerce Web Application (www.saucedemo.com)

Report Date:	September 3, 2026	Prepared By:	QA Tester
Test Cycle:	Cycle 1 (Full Regression)	Build/Environment:	saucedemo.com (Chrome 128, Windows 11)

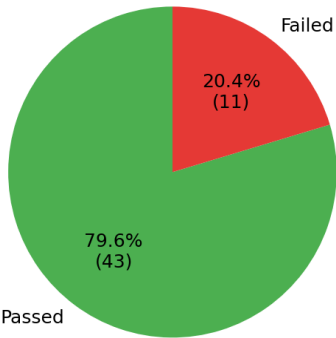

1. Executive Summary

A full manual regression cycle was executed against SauceDemo covering login, product listing/sorting, product detail, shopping cart, checkout, navigation, and UI/visual consistency. **54 test cases** were designed and executed across all 6 documented test personas. **43 test cases passed (79.6%)** and **11 failed (20.4%)**, resulting in **11 logged defects** — 2 Critical, 3 High, 3 Medium, and 3 Low. The core purchase flow is stable for the standard_user account, but multiple account types (problem_user, error_user) surfaced critical defects that fully block checkout completion.

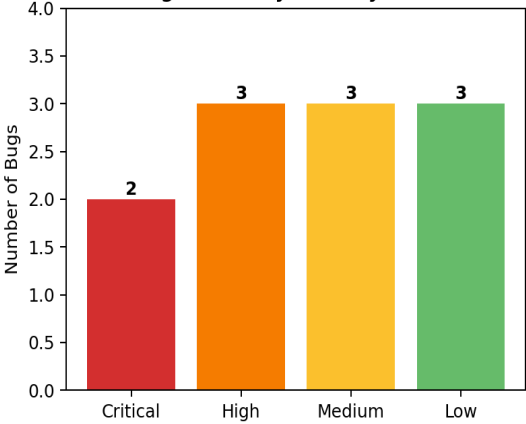

2. Test Execution Metrics

Metric	Value
Total Test Cases Designed	54
Test Cases Executed	54 (100%)
Passed	43 (79.6%)
Failed	11 (20.4%)
Blocked	0 (0%)
Total Defects Logged	11

Test Case Execution Results (n=54)

Bugs Found by Severity (n=11)

3. Results by Module

Module	Total	Passed	Failed
Login	14	13	1
Product Listing	3	2	1
Sorting	5	4	1
Product Details	4	4	0
Cart	10	7	3
Checkout	12	9	3
Navigation	3	2	1
UI / Visual	2	1	1
Total	54	43	11

4. Defect Summary

Bug ID	Title	Severity	Module
BUG-01	Cannot remove items from cart	Critical	Cart
BUG-02	Last Name field not editable in checkout	Critical	Checkout
BUG-03	Product images mismatched	High	Product Listing
BUG-04	Checkout doesn't complete on Finish	High	Checkout
BUG-11	Certain products can't be added to cart	High	Cart
BUG-05	Sorting throws application error	Medium	Sorting
BUG-06	'About' link is broken/404	Medium	Navigation
BUG-07	No input validation on checkout fields	Medium	Checkout
BUG-08	Checkout allowed with empty cart	Low	Cart
BUG-09	UI icons tilted/misaligned	Low	UI/Visual
BUG-10	No loading indicator on slow login	Low	Login

5. Key Risks

Two Critical defects (BUG-01, BUG-02) completely block core shopping flows — cart item removal and checkout completion — for affected account types. Three High-severity defects further degrade the shopping and checkout experience. While these issues are isolated to specific test personas by design of the demo application, in a production system defects of this class in the primary purchase funnel would represent a release-blocking risk.

6. Release Recommendation

Recommendation: NOT READY FOR RELEASE without fixes to Critical/High defects

The standard_user shopping and checkout journey is stable and passed all associated test cases, supporting release readiness for that primary path. However, 2 Critical and 3 High severity defects in cart management and checkout completion must be triaged and resolved (or explicitly waived by the product owner) before sign-off, since these affect the application's core purchase funnel. Medium and Low severity issues (input validation gaps, broken link, UI alignment, missing loading feedback) are recommended for the next iteration and do not block release on their own.

7. Next Steps

- Development team to triage and fix BUG-01 and BUG-02 (Critical) as top priority.
- Re-test all failed cases (TC017, TC022, TC031, TC034, TC035, TC042, TC048, TC049, TC051, TC053, TC011) after fixes.
- Expand test coverage in a future cycle to include cross-browser and mobile-responsive testing.
- Add automated regression tests for the checkout flow to catch future regressions earlier.
